# *the Slate 2*

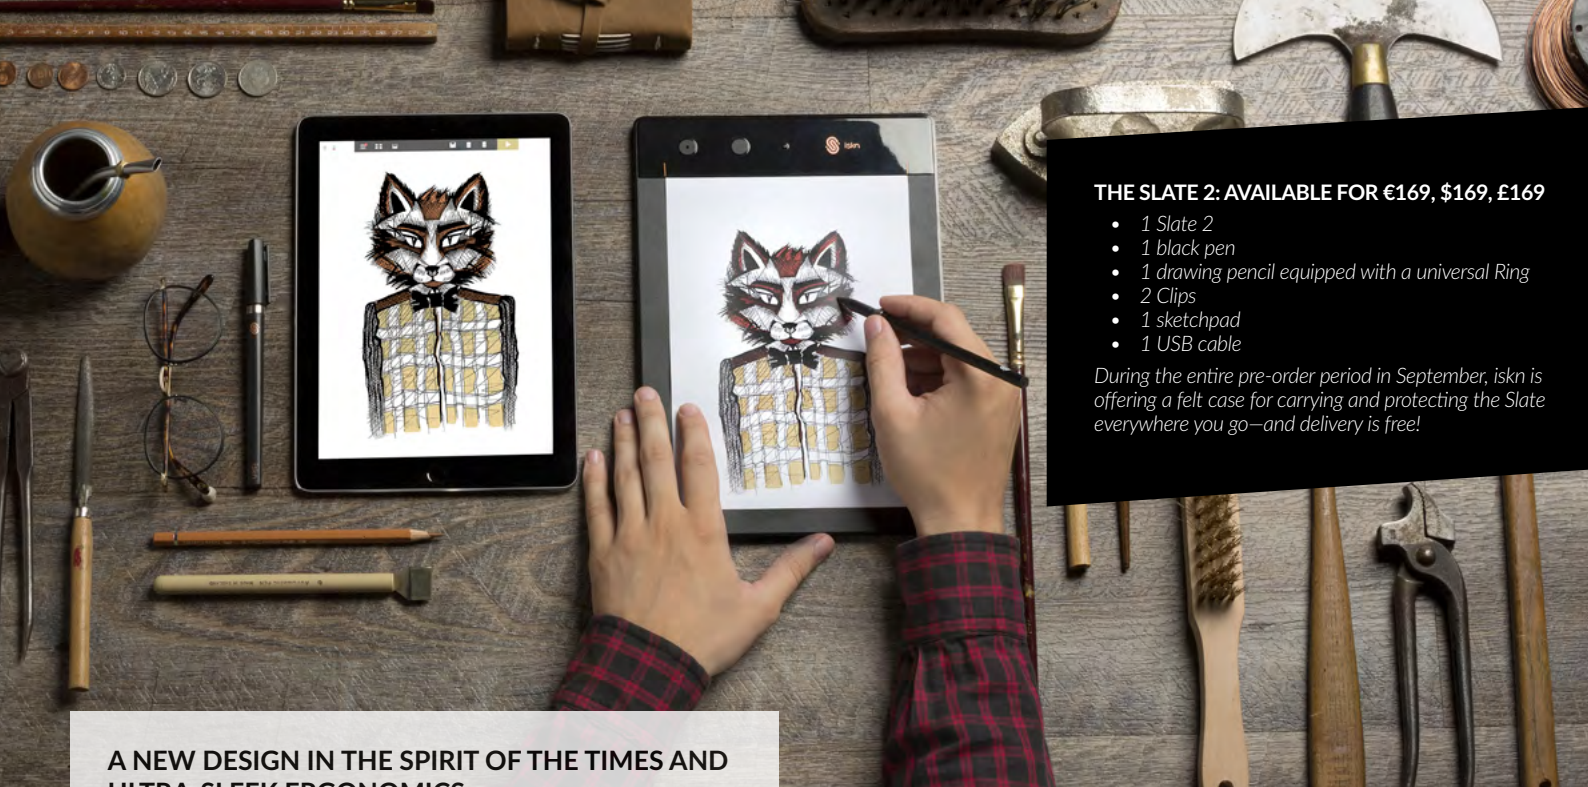

The digital drawing pad  
that everyone is writing about

## **Paris, 9/1/2016**

*Following the success of the Slate, it's time for the Slate 2 to take center stage. A new design and new functionalities—with the same unique, revolutionary way to approach drawing.*

**THE SLATE 2: AVAILABLE FOR €169, \$169, £169**

- 1 Slate 2
- 1 black pen
- 1 drawing pencil equipped with a universal Ring
- 2 Clips
- 1 sketchpad
- 1 USB cable

*During the entire pre-order period in September, iskn is offering a felt case for carrying and protecting the Slate everywhere you go—and delivery is free!*

**A NEW DESIGN IN THE SPIRIT OF THE TIMES AND ULTRA-SLEEK ERGONOMICS**

Thinner but still just as stylish, the Slate 2 is light and sleek, weighing just over 13 ounces (380 g), with a thickness of one quarter-inch (7 mm). Designed for mobile use, it's a model of technology and design, to be used at home with its screen or on the go in standalone mode. The Slate 2 is sturdy and fits easily into a bag, able to be used at any point during the day. In a major change for this new version, the front buttons now make the Slate easier to use; users can program them as they wish for a customized experience.

For added convenience, iskn has increased the internal memory of the Slate 2 from 4 GB to 8 GB, allowing users to create up to 800,000 drawings in standalone mode. In addition, new electronic architecture gives the Slate even greater accuracy.

**STUDIO MODE: FROM DESIGNER TO DIRECTOR**

Besides offering a newly designed device, iskn wanted to allow users to add a new dimension to the projects that they create with the Slate thanks to a new mode available in Imagink. Supplementing the current drawing function is Studio Mode, compatible with PC and Mac, which allows users to animate their creations with effects for layer depth, blur, and parallax. They can then navigate within their drawings while filming them to make animations with artistic effects.

These new functionalities will be available to Slate users in late 2016.

**THE SLATE 2: A COMPREHENSIVE AND UNIQUE CREATIVE EXPERIENCE**

Iskn continues to develop the concept of the Slate. Combining the power of digital with the pleasure of drawing on paper, iskn offers a unique experience to creatives and the general public alike. The Slate 2 is a drawing pad that enables users to digitize—in real time—drawings made on paper, using their own tools such as pencils and pens fitted with the iskn Ring. The Slate comes with the Imagink app, which lets users work with any of 6 different drawing tools, manage layers, import images, and view, export, and share their creations in different formats in just a few clicks: .png, .jpg, .mp4, .psd, and .svg.

To allow users to handle their entire creative process, from paper to all-digital, the Slate will soon be compatible with all drawing software.

**ABOUT ISKN**

*iskn's mission is to combine the natural experience of tangible tools with the power of digital technology. The company was founded in February 2014 by a multidisciplinary team specialized in embedded systems and user experience.*

*As a result of five years of R&D in collaboration with CEA-Leti, the company develops and markets an innovative drawing pad called the Slate, which allows users to digitize and enhance their pen-and-paper creations.*

*With 20 patents, this technology will soon be integrated into many new related products with multiple applications.*
